

Write statements that perform the following tasks.

1. Display "Have a great day" in a message box.
2. Display what appears in `lblCost` in a message box.
3. End a program.
4. Clear a textbox named `txtQuantity`.
5. Display the `Text` property of `txtName` in a label named `lblOutput`.
6. Add 5 to what is stored in `txtQuantity` by 5 and store the result in `lblOutput`.
