

Write statements that perform the following tasks.

1. Display “Hello Jupiter” in a message box.
2. Display “Hello Mercury” in a label named `lblOutput`.
3. Clear a textbox named `txtInput`.
4. Write a complete method that computes the total cost of purchasing five items at \$100 each when the user clicks a button named `btnCompute`. The total cost must be displayed in a label named `lblTotalCost`.
5. Do the same as #4 above except use the quantity inputted into a textbox named `txtInput` instead of five.
