Visual Basic   Name -
Writing Code Worksheet #2   Period -

Write statements that perform the following tasks. **These exercises are similar but worded slightly differently from the exercises on Writing Code Worksheet #1. So several of the exercises have the same exact answers!**

1. Display "Hello World" in a message box.

2. Display "Design the interface" in a label named `lblStep1`.

3. Exit the application.

4. Clear a label named `lblStep1`

5. Display "Plan the code" in a textbox named `txtMessage`.

6. Clear a textbox named `txtMessage` by setting its `Text` property to the empty string.

7. Display "Write the code" in a message box.

8. Set the `Text` property of a label named `lblStep2` equal to the `Text` property of a label named `lblStep1`.

9. Display whatever is currently found in `lblStep1` in a label named `lblStep2`.
